

Comments regarding: WT Docket 96-86

I want to show my support for rule changes that will enable broadband use of the Upper 700 MHz Band. Flexibility is the most important considerations for future technology.

We must maintain at least the same amount of 6.25KHz of voice channels. We are not opposed to reconfiguration as long as we maintain these voice channels.

Flexibility must be given to Regional Planners to deploy 50KHz channels or aggregate channels to over 1MHz if that meets the needs of the user.

Whatever changes are made, need to be made quickly so the band can continue to grow and manufacturers can quickly adapt to the changes.

Thanks

Alan Bull
